

PRESS RELEASE

ESPE AT SOLAR & STORAGE LIVE ITALIA 2026 WITH REFLOW AND PERMATECH

Veronafiere 7 and 8 October — ESPE Group has its own stand as exhibitor, as well as taking part in discussions on BESS and agrivoltaic systems, and on the role of solar power as an industrial asset for businesses

Grantorto (PD), 07 October 2026 – The EPC contractor ESPE S.p.A. (“ESPE” or the “Company”), parent company of the **ESPE Group**, operating in the renewable energy sector as a supplier of photovoltaic systems, and owner of “ESPE” brand technology for the manufacture of small-medium wind turbines and biomass cogenerators, is among the exhibitors at **Solar & Storage Live Italia 2026**, an event dedicated to the photovoltaic and energy storage markets, taking place **7 and 8 October 2026** at **Veronafiere**.

Solar & Storage Live Italia 2026 affords ESPE the opportunity to present an industrial vision centred on integrating the development, creation and management of systems, promoting its value chain approach in a setting characterized by the evolution of PV and storage technology.

In electing to host a stand at the show along with two other companies of the Group, **Reflow S.r.l.** and **Permatech S.r.l.**, ESPE confirms its status as an integrated operator in the solar power and energy storage sectors. With the two subsidiaries also exhibiting, visitors will be able to see how the Group offers expertise and solutions throughout the entire life cycle of energy projects: from development and origination to the design and construction of systems, as well as Operation and Maintenance.

The event includes a programme of conferences, one of which at 10:40 on the first day, **7 October**, with **Matteo Vecchiato, CEO of Permatech S.r.l.** speaking on the topic **“Origination and development of BESS and agrivoltaic systems in an integrated supply chain”**. He explores the role of project development in initiatives relating to energy storage and agrivoltaic systems, highlighting the importance of a value chain capable of integrating technical, regulatory and industrial expertise.

At 12:20 on the second day, **8 October**, **Enrico Meneghetti, CEO of ESPE S.p.A.**, takes part in a panel discussion entitled **“Energy as an asset: how businesses turn solar power into operating profit”**. This is concerned with the role of solar power as a driver of competitiveness for businesses, looking in particular at on-site PPAs, the optimization of energy assets, flexibility and storage systems.

Matteo Vecchiato, CEO of Permatech S.r.l. – ESPE Group, gave this message: “As areas of development, BESS and agrivoltaic systems are becoming increasingly important for the energy

transition, but they require integrated expertise right from the earliest stages of planning. Origination, site analysis, authorization procedures, technical assessments and cost sustainability must all be addressed adopting a coordinated approach. As a company of the ESPE Group, Permotech contributes to this process by focusing on the development of projects that combine technical quality, industrial soundness and the ability to generate value over time.”

Enrico Meneghetti, CEO of ESPE S.p.A. – ESPE Group, stated: “For ESPE, being involved in Solar & Storage Live Italia 2026 represents an important opportunity to engage with the market on key issues affecting the future of energy. Photovoltaic and energy storage systems are no longer simply tools that help to achieve sustainability, but real industrial assets with the power to influence the competitiveness of businesses, the stability of energy costs and the generation of operational value. Being here along with Reflow and Permotech as joint exhibitors, we demonstrate how the ESPE Group can offer the market an integrated package, from development right through to the construction and management of systems.”

The presence of the ESPE Group at Solar & Storage Live Italia 2026 is consistent with its strategy for growth, and with the valorization of an industrial model based on the integration of complementary skills. It is an approach that enables the Company to support businesses and investors in increasingly complex energy projects, where quality of execution, centrality of the value chain and long-term management capabilities are key factors in success.

About ESPE S.p.A.

ESPE, listed since 2024 on the Euronext Growth Milan market of Borsa Italiana (ISIN IT0005573818, ticker ESPE), has been operating in the energy sector since 1974 and is a leading player in Italy as an EPC contractor for photovoltaic systems and ground-mounted solar farms, as well as a system integrator for complex system engineering solutions using proprietary 'ESPE'-branded technologies. The parent company of the ESPE Group has consolidated its structure through strategic external growth initiatives and the integration of all stages of the renewable energy value chain: from design and engineering to turnkey construction and system maintenance, with a distinctive position in the utility-scale photovoltaic and agrivoltaic segments, in industrial electrical systems and in Energy Security services. The ESPE offering is targeted primarily at Independent Power Producers (IPPs), investors and infrastructure funds, large industrial groups and energy-intensive companies, as well as advanced agricultural businesses that operate or intend to operate as independent energy producers, and structured IPPs active in the development of agrivoltaic systems. The Group offers integrated control over the entire life cycle of innovative and sustainable energy systems and solutions, contributing materially to nationwide decarbonization and energy security.
